

GROUNDWATER STORAGE AND RECOVERY PROJECT

WESTSIDE BASIN GROUNDWATER MONITORING

BASELINE Key Staff

Bruce Abelli-Amen, Principal-in-Charge

William Scott, Field Team Leader

Monika Krupa, Field Support and Data Management

Status

On-going

Total Budget to Date

\$278,000

Baseline managed the groundwater monitoring (field monitoring and data analysis) for San Francisco's Westside Basin for several years to support the SFPUC's plan to supplement municipal water supplies with groundwater as part of the Groundwater Storage and Recovery Project. The monitoring network includes over 35 wells spread over two counties. Baseline managed the field sampling, which included refitting all wells with dedicated sampling equipment and compiled all the groundwater level and groundwater quality data. Baseline also managed and maintained all of the monitoring equipment and developed instructional user guides and protocols for newer SFPUC employees to use to learn to maintain the systems themselves.
